

Solar energy research directory

The Department of National Development and CSIRO jointly produced their solar energy research directory some months ago. Entitled 'A Directory of Australian Solar Energy Research and Development', the publication lists a total of 143 solar energy research projects currently under way in this country. Of these, 30 are in CSIRO, 80 in universities and other tertiary institutions, 19 in industry, and 14 in government organizations other than CSIRO.

As well as listing and briefly describing the 143 projects,

the directory gives details of Commonwealth and State government bodies established to advise on energy research and development. It also lists commercial manufacturers of solar systems.

The directory has been published to assist those involved in solar energy research, and to stimulate public awareness of solar energy in Australia. This free publication is available from the Head, National Energy Office, Department of National Development, P.O. Box 5, Canberra City, A.C.T. 2601.
